Arms Acres and Conifer Park

Arms Acres and Conifer Park are private healthcare systems specializing in providing quality therapeutic care to clients coping with alcoholism and chemical dependency.

Building treatment plans around the twelve-step programs outlined by Alcoholics Anonymous and Narcotics Anonymous, staff at Arms Acres and Conifer Park work with patients to identify triggers for abuse and methods to promote sobriety. Together, counselor and client create a personalized treatment plan and an individualized approach to aftercare planning.

There is a dedicated Women's unit at both facilities, where female clients are encouraged to explore recovery strategies related to issues including depression, parenting, codependency, anger, anxiety, loss and trauma.

Arms Acres and Conifer Park are located in New York State and accept Medicaid and most major insurances. Transportation to either facility is provided if necessary. Additional information is available by calling Arms Acres at (800)989-2676 or Conifer Park at (800)989-6446.

Willingway Hospital

Willingway Hospital has been Quietly Saving Lives from the disease of addiction since 1971. The program was founded by Dr. John and Dot Mooney in the 1960's when they began treating alcoholics and addicts in their home. Willingway has grown into one of the most highly respected addiction treatment programs anywhere. Willingway is a free-standing specialty hospital, offering a true full continuum of care including: medical detox, inpatient residential, outpatient and extended care.

The Waismann Method

Opiate pain medications like Vicodin and Oxycontin are commonly prescribed and often cause physical dependency. Until now, treatments for opiate dependence have been unsuccessful and unpleasant. But now, because of increased understanding of the illness, patients no longer need to rely on these painful and ineffective methods. By medically inducing detoxification while the patient is under anesthesia, doctors are able to reverse opiate dependency with The Waismann Method in a safe and humane manner.

Caron Treatment Centers

Since 1957, Caron Treatment Centers have helped over 100,000 families suffering from addiction. We provide a 12-step program designed to give recovering addicts and alcoholics the tools they need to manage the disease that plagues them. Caron provides gender separate and gender specific treatment for men, women and adolescents. We provide a Parent Network at carontreatment.com that gives parents information on the warning signs of addiction and access to other parents who understand what it is like to have an adolescent who abuses drugs or alcohol. Our Family Education Program is a key component of our treatment process-helping families understand the disease concept of addiction, the addiction cycle and the role "enabling" plays in family dynamics. Our Young Adult Male Program provides an environment to address the special needs of young adult males (ages 20-27). Our Student Assistance Program is a traveling educational program that reaches students throughout the East coast and educates them about the consequences of addiction. In addition, Caron has extensive experience in the treatment of co-occurring disorders. For more information visit carontreatment.com.

Losing her in a grocery store when she was 5 was nothing compared to this.

Losing your adolescent to drugs and alcohol is like nothing else you've ever experienced. The sense of helplessness is overwhelming. But there is hope. Visit the Parent Network at carontreatment.com to learn warning signs of addiction or to talk to another parent who has felt the way you do now. The sooner you get help, the sooner you can get your adolescent back. And your family on the road to recovery.
